Grade-5 E	About SAFAL	ubjects	
	Structured Assessment For Analyzing Learning (SAFAL) aims to establish a formal protocol to collect valid and reliable data to chart students' performance on competencies at and below the grade-level.		
	It reports school-level performance on key competencies and proficiency levels, and helps measure effectiveness of a system through systematic monitoring and reporting of learning levels. School management can use this data for targeting academic support and database management. SAFAL results are reliable and provide an 'absolute' measure of learning for parents, schools and state officials to assess school performance on core concepts. SAFAL results shall not to be used to pass or fail students at any stage, and are recommended to be used only for developmental purposes as envisaged in NEP 2020.		?
